Market position

Established in 1989, one of Vietnam's leading commercial banks, building its foundation on a digital culture with four core pillars: customer centricity, data-driven orientation, innovation, and collaboration.

The first private bank in Vietnam to issue USD 118 million in green bonds, while also pioneering the publication of a "Sustainable Finance Framework" in accordance with ICMA and LMA standards

Medium and long-term prospectus

POSITIVE OUTLOOK **FOR MEDIUM TO LONG-TERM**

Expanding credit activities and retail customers – Continuing to strengthen personal and SME lending while developing a consumer finance ecosystem helps HDBank maintain stable growth in interest income and expand its market share in the retail banking segment.

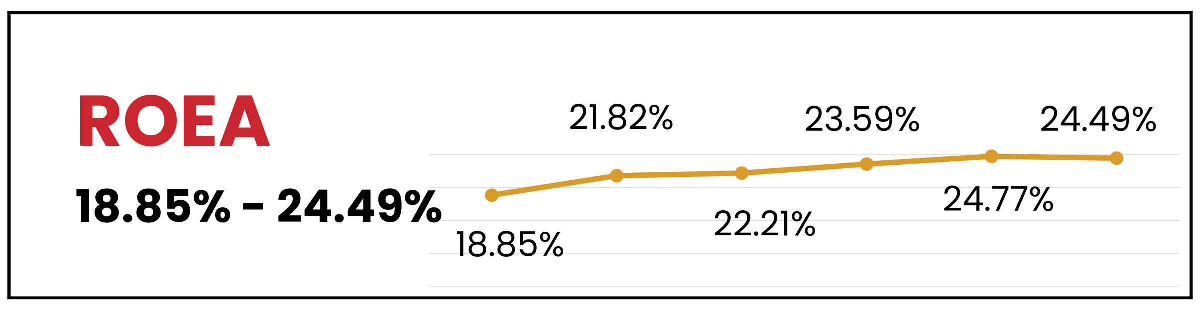
Sustainable development and digital transformation strategy – HDBank focuses on accelerating digital banking, optimizing operational efficiency, and prioritizing capital for the agriculture and rural sectors, helping the bank maintain its competitive advantages and achieve long-term growth.

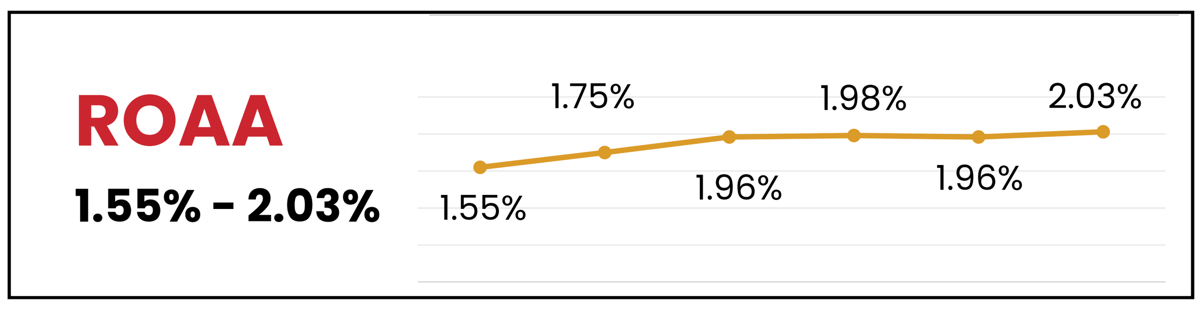
RISK TOLERANCE

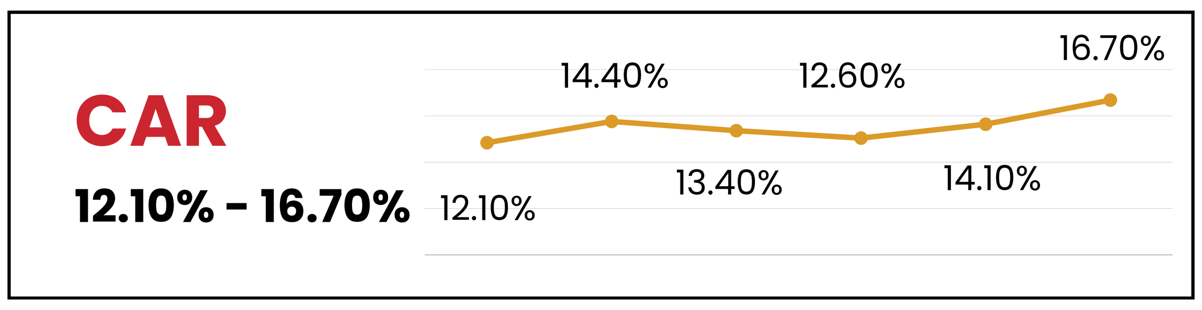
MODERATE TO HIGH RISK

Although it remains exposed to cyclical and structural factors of the broader economy. This reflects the bank's prudent operating orientation as a state-owned commercial bank.

The bank maintains key safety indicators, such as the capital adequacy ratio (CAR), at levels compliant with regulatory requirements. However, it continues to face capital pressure as its asset base expands rapidly, necessitating ongoing capital injections to sustain growth momentum. Despite challenges related to asset quality—evidenced by a rising non-performing loan (NPL) ratio—and a net interest margin (NIM) that is relatively lower than the industry average, BIDV's large scale and its systemic importance enable it to sustain stable growth. These factors collectively support its overall risk profile at a moderate to low level.







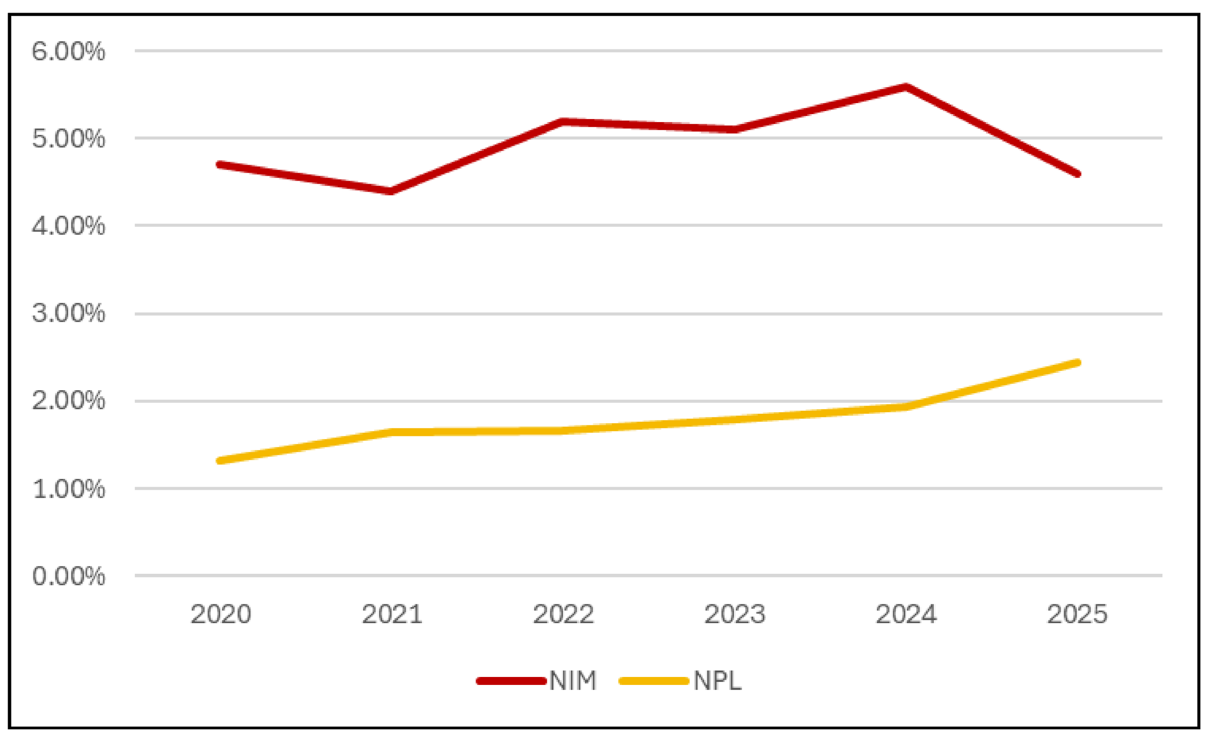
TIME HORIZON

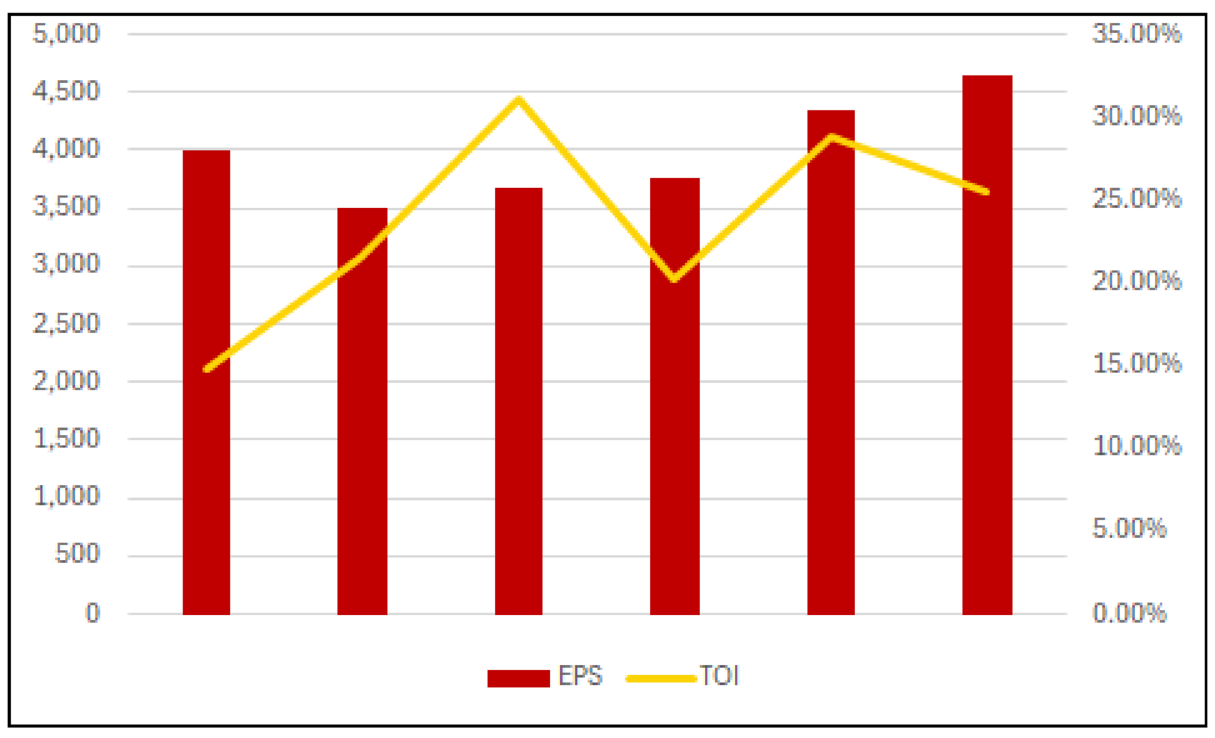
SUITABLE FOR A MEDIUM TO LONG-TERM INVESTMENT HORIZONS

Banking growth typically follows the broader economic cycle and requires time for credit expansion, customer growth, and digital transformation strategies to fully contribute to earnings

3-5 YEARS OR LONGER

HDB's strong position in retail banking and consumer finance may support sustainable long-term profitability.





Financial performance

BIDV's total operating income (TOI) growth during the 2020–2025 period remained broadly positive, with most years recording double-digit growth, reflecting a steady expansion in business scale. Notably, in 2023, TOI growth slowed to approximately 4.93% due to the State Bank of Vietnam's policy rate cuts aimed at supporting economic recovery. This led to a significant compression in net interest margin (NIM) of around 16 basis points year-over-year.

Profitability improved markedly, with ROE increasing from 8.9% to around 19% and ROA rising from 0.47% to nearly 1%, indicating enhanced efficiency in the utilization of equity and assets. Earnings per share (EPS) also showed consistent growth over the years, suggesting a sustainable earnings trajectory. Meanwhile, the non-performing loan (NPL) ratio was maintained at approximately 1–1.3%, and the capital adequacy ratio (CAR) ranged between 8.6% and 9.3%, reflecting a relatively stable financial safety buffer, albeit with ongoing capital pressure amid strong credit growth.
