Financial performance

During the 2020–2025 period, the company’s business performance experienced **significant fluctuations but still demonstrated a positive long-term recovery trend**. Revenue growth remained modest at 1.02% in 2020 before surging to 64.73% in 2021 and 45.68% in 2022, reflecting an effective expansion phase. However, revenue declined by 27.15% in 2023 and remained nearly flat in 2024 before recovering by 22.73% in 2025. Net profit after tax increased sharply from VND 1,729,804 million in 2020 to VND 5,584,891 million in 2022, but fell significantly to VND 529,817 million in 2023 before stabilizing in the following years. ROEA and ROAA peaked at 45% and 35.20%, respectively, **in 2022, indicating very high efficiency in the use of equity and assets**. Although these indicators declined sharply in 2023, they gradually improved again by 2025. EPS also rose significantly from VND 1,767 to VND 14,220 during 2020–2022 before dropping to VND 1,327 in 2023 and recovering to VND 2,217 in 2025, reflecting **an improvement in the company’s ability to generate returns for shareholders after a challenging period**.

Market position

Petrovietnam Fertilizer and Chemicals Corporation is **one of the leading fertilizer producers in Vietnam** and a dominant player in the domestic urea market. DPM holds **an estimated 35–40% market share nationwide**, particularly **strong in the Southeast and Central Highlands regions**. Beyond fertilizers, DPM has expanded into industrial chemicals and maintains **leading positions in products such as ammonia (NH₃), liquid carbon dioxide (CO₂), and UFC85**. This diversification strengthens the company’s role as **an important supplier for both Vietnam’s agricultural and industrial sectors**.

RISK TOLERANCE

LOW-TO-MODERATE RISK

maintains a relatively conservative risk profile with strong cash reserves, low debt, and stable dividend payments. However, DPM still faces operational risks related to rising natural gas input costs and fluctuations in global urea prices, which may pressure profit margins. In addition, strong competition from imported fertilizers creates pricing pressure in the domestic market. To mitigate these risks, the company focuses on improving production efficiency, maintaining flexible inventory management, and optimizing operational costs to preserve stable profitability.

TIME HORIZON

MEDIUM TO LONG-TERM INVESTMENT HORIZON

The reason is that port and logistics infrastructure requires time to expand capacity, attract long-term shipping contracts, and fully benefit from Vietnam’s trade growth cycle.

3 TO 5-YEAR OR LONGER STRATEGIC HORIZON

In addition, GMD’s earnings are closely linked to long-term export-import trends and FDI-driven industrial expansion, making it more appropriate for investors seeking stable growth over a longer period.

Medium- and Long-Term Outlook

Expansion into Chemicals and NPK Fertilizers

Petrovietnam Fertilizer and Chemicals Corporation is expanding beyond traditional urea products into higher-value NPK fertilizers and industrial chemicals to diversify revenue streams and improve long-term competitiveness.

Sustainable Agriculture Strategy

The company is investing in advanced and eco-friendly fertilizer products that align with sustainable farming trends and increasing demand for high-quality agricultural solutions.

Strong Financial Foundation

Supported by strong cash flow, low debt, and a well-established brand, DPM is well-positioned to strengthen its role as a diversified chemical and agricultural corporation in Vietnam.
