Market position

FPT is a leading technology and telecommunications company in Vietnam, pioneering in digital transformation, consulting, provision, and implementation of technology and telecom solutions. The company operates in 30 countries and territories worldwide, executing its business development strategy based on core technologies such as artificial intelligence, big data analytics, cloud computing, automation, and the Internet of Things. In 2025, FPT’s market capitalization is estimated to reach nearly VND 163 trillion, with total revenue projected at VND 58,880 billion.

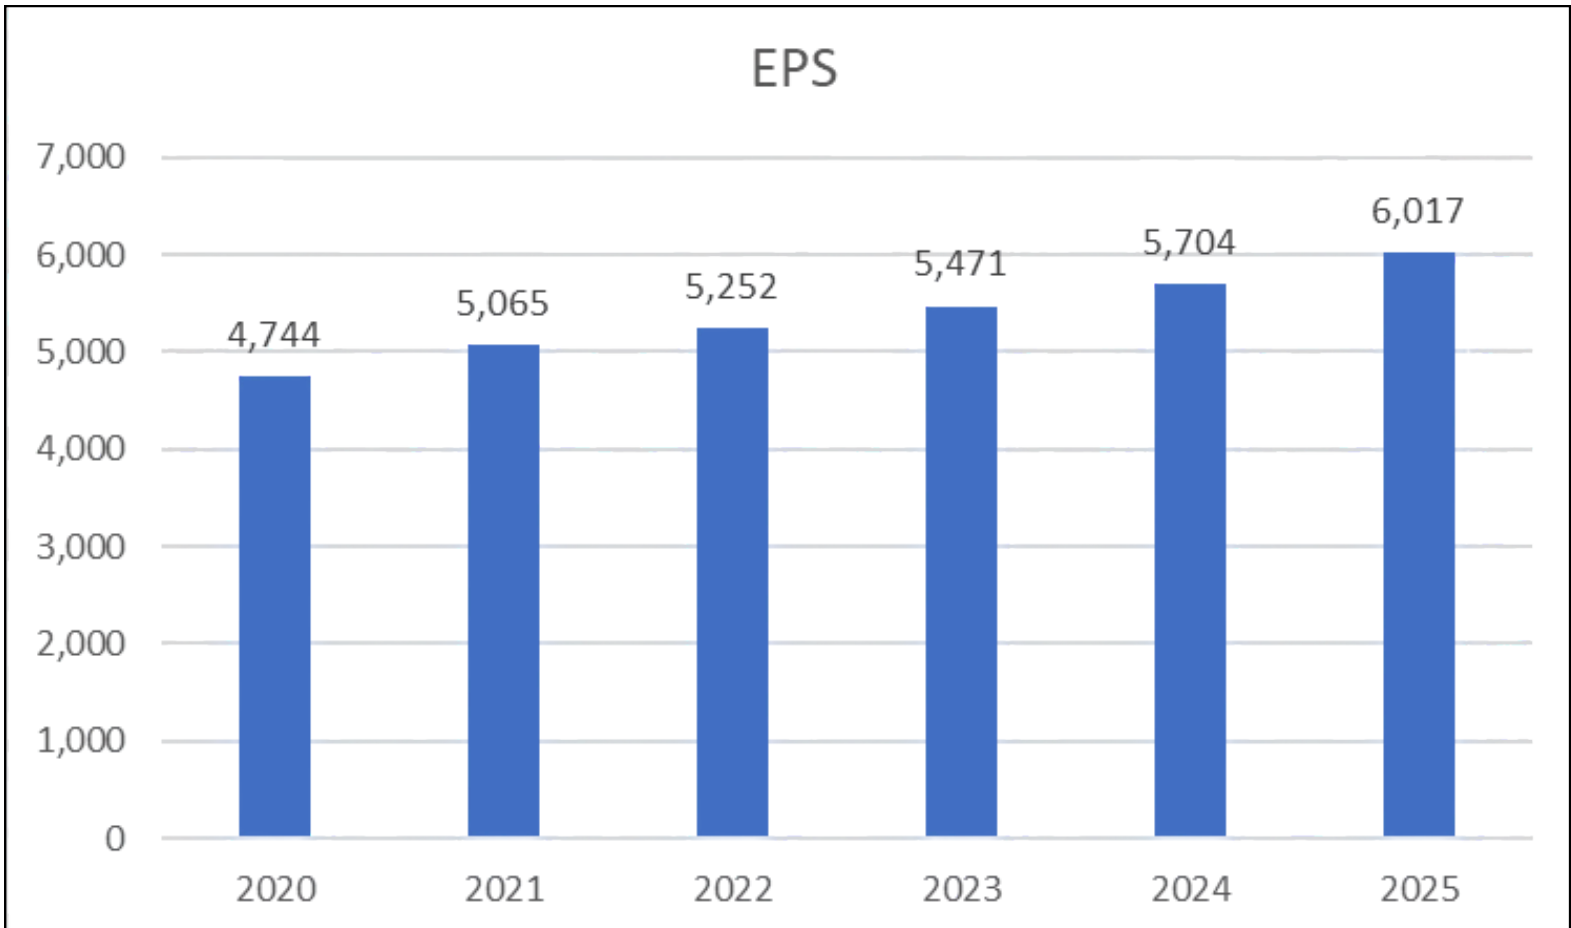

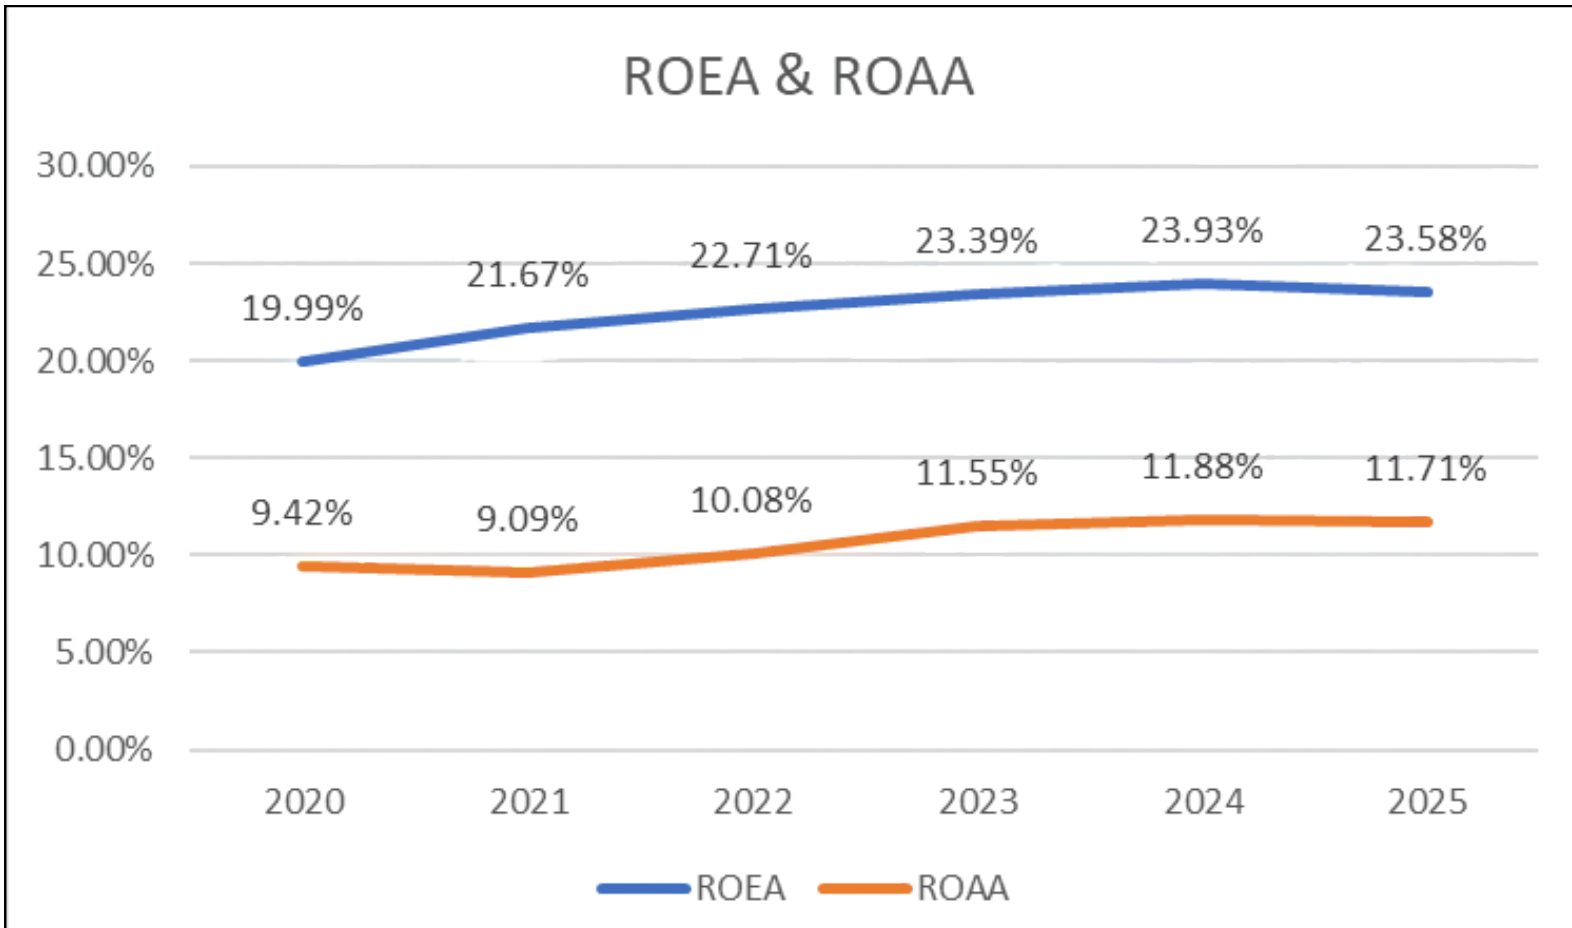

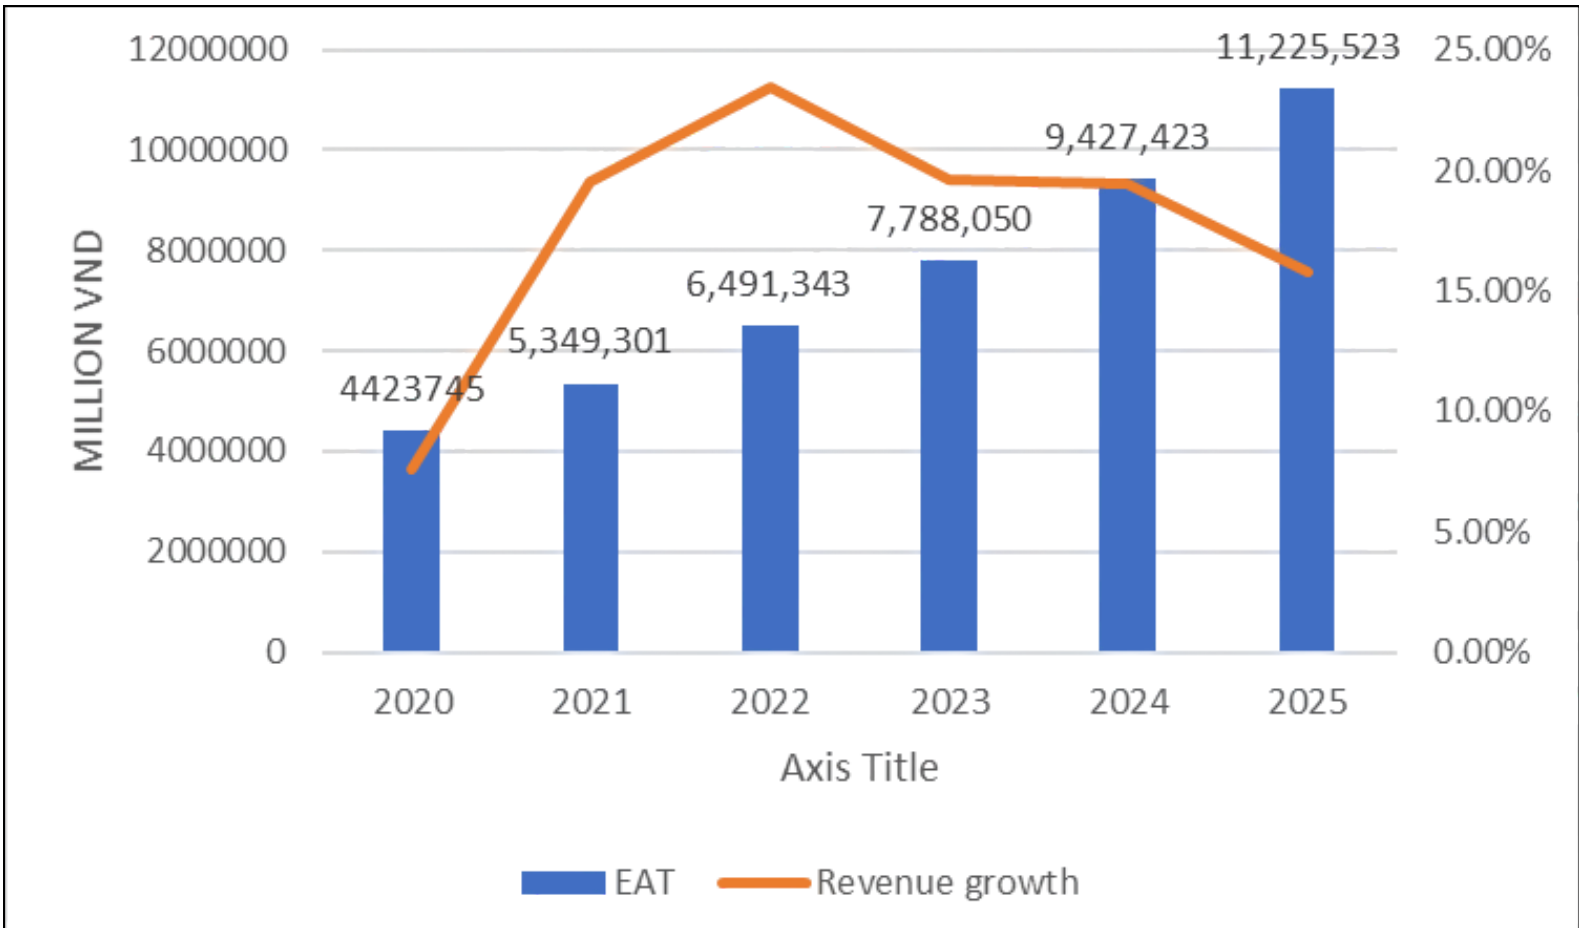

Financial performance

FPT has maintained double-digit growth for several years, averaging 15–20% annually. It is considered one of the stable, high-quality growth stocks.

Net profit after tax grew from VND 4,423,745 million in 2020 to VND 11,225,523 million in 2025, corresponding to a compound annual growth rate (CAGR) of approximately 20% per year. Meanwhile, ROE has remained high above 20%, and ROA has shown continuous improvement, reflecting increasingly efficient use of capital and assets. EPS has grown steadily over the years, indicating that profit growth is sustainable and not reliant on one-off or extraordinary factors.

Business model

FPT operates under a three-pillar business model encompassing Technology, Telecommunications, and Education. This model creates a mutually supportive ecosystem among these pillars, helping to diversify revenue streams and reduce reliance on any single sector. In the Education sector, FPT focuses on training high-quality human resources to serve the market and support its long-term development strategy.

RISK TOLERANCE

Although it is regarded as one of the companies with stable and sustainable growth, FPT still faces significant risks. Firstly, a large portion of its contracts comes from international markets such as the United States, Japan, and Europe. This implies that if these economies experience downturns, companies may reduce their technology budgets, directly impacting FPT’s revenue. In addition, due to the high proportion of revenue generated from overseas markets, the company is also exposed to foreign exchange risk. Moreover, the rapid pace of technological change requires FPT to continuously invest in research and development to maintain its competitive advantage, especially when facing strong competitors from India and other countries. Based on the above factors, FPT’s risk tolerance can be assessed at a moderate level. It is not considered high risk, as the company is large, demonstrates stable revenue growth, and benefits from risk diversification, which enables it to maintain relatively effective risk control.

Medium & long-term prospectus

16% projected IT sector growth

The information technology sector is expected to grow by 16% next year, supported by the global digital transformation trend.

National digital transformation program

The Vietnamese Government promotes digital transformation, creating strong demand for technology and telecommunications services from both public and private sectors.

Strong long-term growth potential

With solid financial performance and sustainable profit growth, FPT is well positioned to benefit from long-term digitalization trends, supporting future revenue and profitability improvement.

TIME HORIZON

FPT stock is considered suitable for investors with a moderate risk appetite and a medium- to long-term investment horizon due to the following factors:

- Sustainable growth
- Benefiting from the digital transformation trend
- Consistent increases in profit and earnings per share over the years
