Market position

MBBank is currently **one of the leading joint-stock commercial banks in Vietnam, holding a position among the top banks in terms of scale and operational efficiency**. The bank possesses a strong financial foundation, stable credit growth, and outstanding profitability thanks to its high CASA ratio. In addition, **MBB continues to strengthen its competitive advantage through an aggressive digital transformation strategy**, a diversified financial ecosystem, and a rapidly expanding customer base. With these advantages, MBBank is further consolidating its position as one of the market-leading banks with strong potential for sustainable growth in the future.

RISK TOLERANCE

MODERATE TO HIGH RISK

Although it remains exposed to cyclical and structural factors of the broader economy. This reflects the bank’s prudent operating orientation as a state-owned commercial bank. The bank maintains key safety indicators, such as the capital adequacy ratio (CAR), at levels compliant with regulatory requirements. However, it continues to face capital pressure as its asset base expands rapidly, necessitating ongoing capital injections to sustain growth momentum. Despite challenges related to asset quality—evidenced by a rising non-performing loan (NPL) ratio—and a net interest margin (NIM) that is relatively lower than the industry average, BIDV’s large scale and its systemic importance enable it to sustain stable growth. These factors collectively support its overall risk profile at a moderate to low level.

Medium and long-term prospectus

POSITIVE OUTLOOK FOR MEDIUM TO LONG-TERM

Expansion of credit activities and financial ecosystem

Continuing to promote lending activities for individual and corporate customers, along with developing a diverse financial ecosystem, helps MBB maintain stable revenue sources and create long-term growth momentum for revenue and profit

Sustainable development and digital transformation strategy

The increasing demand for banking services and the rapid growth of cashless payment trends in Vietnam provide favorable conditions for MBB to expand its customer base, boost credit growth, and enhance service income.

Digital transformation strategy and competitive advantages

MBB focuses heavily on investing in technology, developing digital banking services, and optimizing operational efficiency. In addition, the bank possesses a strong financial foundation and a high CASA ratio, enabling it to maintain competitive advantages and improve profitability in the long term.

TIME HORIZON

SUITABLE FOR A MEDIUM TO LONG-TERM INVESTMENT HORIZONS

Holding significant competitive advantages in its extensive network, digital transformation capabilities, and one of the highest CASA ratios in the industry, which helps optimize funding costs and maintain strong profitability.

3–5 YEARS OR LONGER

MBB is considered an attractive choice for long-term accumulation and holding strategies thanks to its stable dividend policy through both cash and stock dividends, while also benefiting from the bank’s future credit growth and expanding market share.

Financial performance

During the 2020–2025 period, the bank maintained positive operating performance, with total operating income showing stable growth, especially strong increases during 2021–2022 before slowing in 2023 and recovering positively in the following years. ROEA and ROAA consistently remained at high levels, reflecting efficient use of equity and assets. EPS stayed relatively stable throughout the years, indicating the bank’s sustainable profitability for shareholders. The capital adequacy ratio consistently remained above the regulatory requirement, demonstrating the bank’s strong financial foundation. Meanwhile, NIM showed a slight downward trend from 2023 due to competitive pressure and rising funding costs, while the non-performing loan ratio was maintained at a relatively low level, reflecting stable asset quality and effective risk management capabilities.
