Market position

MSR holds a unique and strategically important position in the global mining industry as one of the world's leading producers of tungsten materials outside China. Through its ownership of the Nui Phao mine, one of the largest polymetallic mines globally, the company has established an integrated value chain spanning mining, processing, and high-tech materials production. This enables MSR to serve a diverse international customer base across industries such as manufacturing, automotive, aerospace, and electronics. Its strong resource base, advanced processing capabilities, and global market presence provide significant competitive advantages and support its long-term growth potential.

Financial performance

RISK TOLERANCE

High level of risk

The company experienced strong growth during 2020–2022, with significant improvements in both revenue and profitability, particularly in 2021 when growth reached its peak. However, business performance deteriorated markedly from 2023 onward as revenue growth turned negative and the company incurred substantial losses during 2024–2025. Profitability indicators such as ROEA, ROAA, and EPS declined sharply and even became negative for several years, reflecting a significant weakening in operational efficiency and profit-generating capability. Overall, the company's current financial condition carries a high level of risk and will require time to achieve a sustainable recovery.

The company operates in the mining and materials industry, where performance is highly influenced by global commodity prices, demand from industrial sectors, and geopolitical factors. Earnings can be volatile due to fluctuations in tungsten and other mineral prices, as well as changes in global economic conditions. However, MSR's leading position in the global tungsten market and its integrated value chain provide significant long-term growth opportunities for investors willing to accept higher levels of risk.

Medium- and Long-Term Outlook

Growing demand for high-tech materials

The increasing adoption of advanced technologies, electric vehicles, renewable energy systems, and aerospace applications is expected to drive long-term demand for tungsten and other strategic materials produced by MSR.

Strategic position in the global tungsten market

As one of the leading tungsten producers outside China, MSR is well-positioned to benefit from global supply chain diversification and growing demand for secure sources of critical minerals.

Integrated value chain and operational efficiency

MSR's integrated business model, spanning mining, processing, and high-tech materials production, enhances value creation and strengthens its competitive advantage. Continued improvements in operational efficiency and product quality are expected to support sustainable growth and profitability

TIME HORIZON

SUITABLE FOR MEDIUM- TO LONG-TERM INVESTMENT

(APPROXIMATELY 1–3 YEARS).

The company is expected to benefit from improving tungsten prices, growing demand for critical minerals, and continued recovery in global industrial activity. In addition, ongoing efforts to enhance operational efficiency and expand value-added processing capabilities could support earnings growth over the next few years. However, investors should remain aware of commodity price volatility and fluctuations in global economic conditions.
