Market position

Vingroup is **the largest and most influential private conglomerate in Vietnam**, occupying a towering position across the nation’s economic landscape. Historically anchored by its undisputed dominance in premium real estate (Vinhomes) and hospitality (Vinpearl), the group has successfully pioneered a comprehensive ecosystem that touches almost every aspect of Vietnamese consumer life. Today, Vingroup has aggressively pivoted its market position toward high-tech industrial manufacturing, spearheaded by VinFast—its global electric vehicle (EV) subsidiary. As a national champion, Vingroup acts as a key structural driver of Vietnam’s modernization, leveraging its massive domestic real estate cash engine to fund its ambitious expansion into the international automotive and smart mobility markets.

Medium and long-term prospectus

Recovery of the Real Estate Segment

Vinhomes is expected to continue generating strong cash flow and stable pre-sales as Vietnam’s property market gradually recovers and legal frameworks become clearer.

Expansion of the EV Ecosystem

VinFast continues expanding globally with the goal of increasing production scale, optimizing costs, and gaining market share in North America, Europe, and Southeast Asia.

Long-term Transformation Strategy

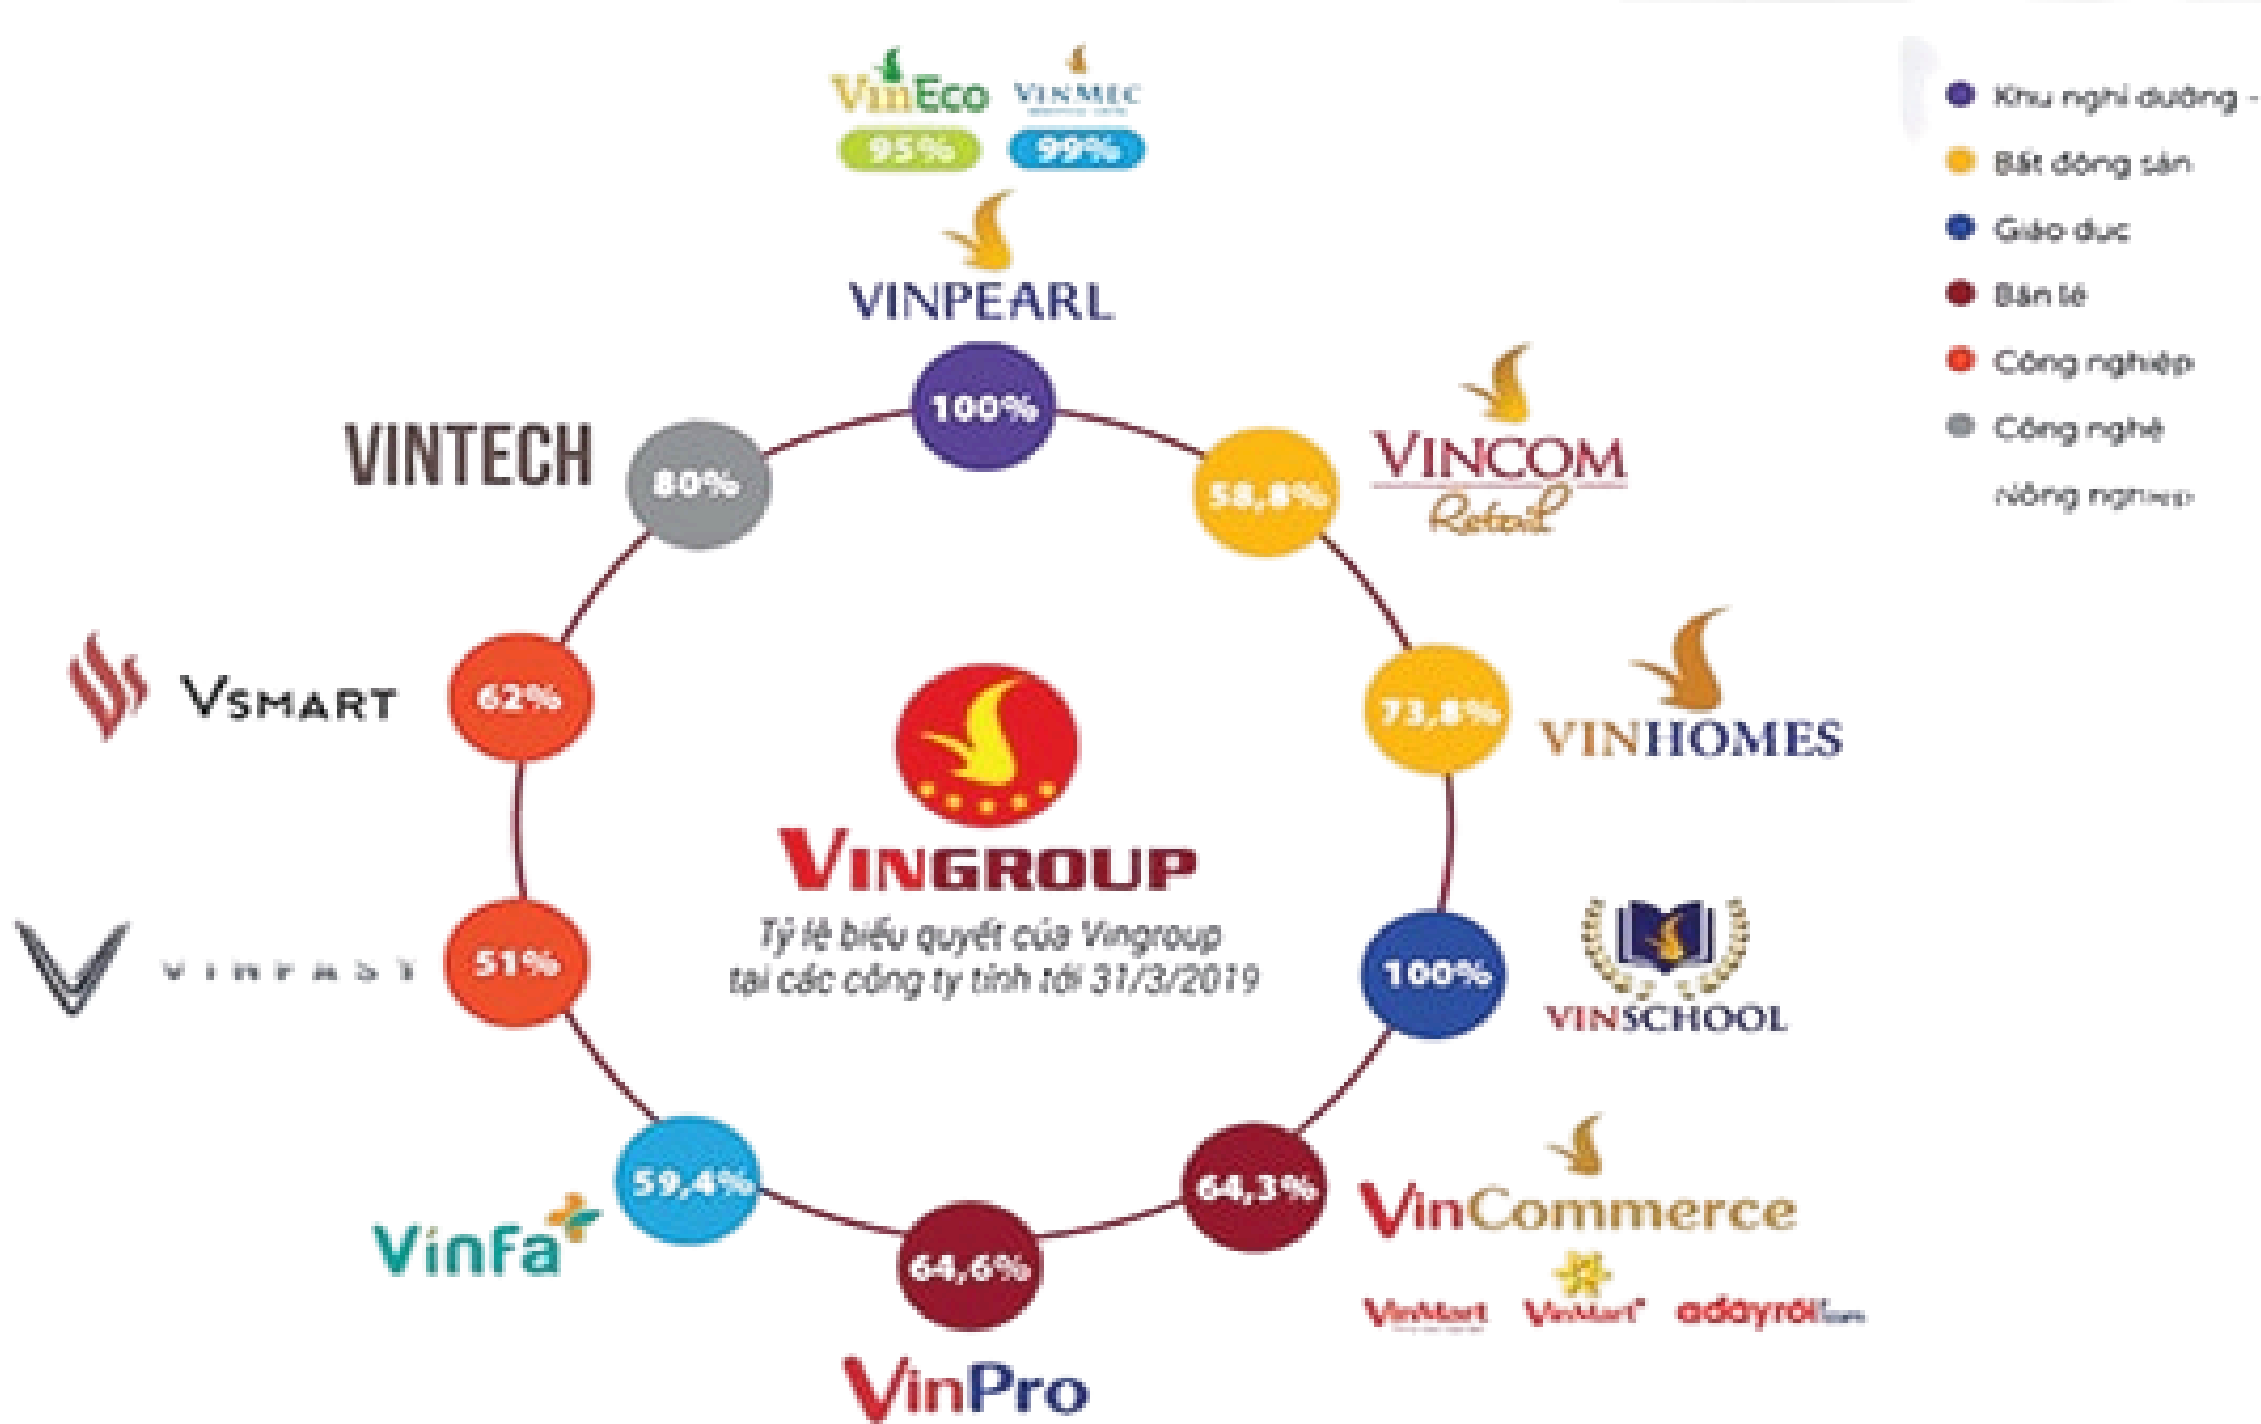

If Vingroup successfully manages its high-investment phase and improves EV profitability, the group has strong potential to evolve from a domestic real estate leader into a global technology and industrial conglomerate.

Financial performance

During the 2020–2025 period, the company’s business operations experienced significant fluctuations, particularly under strong pressure during 2020–2022 before recovering positively in the following years. Revenue growth was unstable in the early stage but improved significantly from 2023 onward and maintained strong momentum through 2025, indicating that the company has gradually regained its growth momentum. Net profit after tax fluctuated considerably, shifting from a profit of VND 4,545,573 million in 2020 to a loss of VND 7,558,164 million in 2021, before recovering strongly and reaching VND 11,064,814 million in 2025. ROEA and ROAA showed a similar trend, falling to negative levels in 2021 before gradually improving in subsequent years, reaching 7.53% and 1.16%, respectively, in 2025. EPS declined from VND 1,586 in 2020 to negative VND 650 in 2021, then recovered to VND 3,069 in 2024 before adjusting to VND 1,468 in 2025, indicating that the company’s ability to generate returns for shareholders improved significantly after a challenging period.

Business model

8 lĩnh vực kinh doanh của Vingroup

RISK TOLERANCE

Vingroup has a **high risk profile** due to its aggressive and capital-intensive expansion strategy, particularly through large investments in VinFast. The group is highly exposed to financial leverage, global EV competition, international capital market conditions, and fluctuations in Vietnam’s property market. To manage these risks, VIC focuses on international fundraising, debt restructuring, and strategic asset optimization to maintain liquidity and support long-term growth.

TIME HORIZON

LONG-TERM INVESTMENT HORIZON (5 YEARS OR LONGER)

Vingroup is more suitable for long-term investors who can tolerate high volatility. The company’s future growth depends heavily on the success of VinFast, large-scale urban developments, and its long-term ecosystem expansion strategy.
